13	Litecoin Foundation	28	Sourcebook
14	MWEB security desk	29	Back cover
15	Bitcoin Core		
16	Lightning Network		
17	Timechain Calendar		

THE EDITORIAL READ

Sound money deserves rigorous journalism. This redesign puts Bitcoin, Litecoin and the Nakamoto Standard at the center, while separating research, opinion and source uncertainty. The cover is original vector artwork; every numeric chart is built from the recorded data.

This is a review edition, not a fully reconciled institutional data feed. Daily live-capture gaps are named on their pages.

SOURCES / Sourcebook p28

THE MARKET OPENING

Five assets. One clear cutoff.

Price observations carried from the morning edition; not an afternoon quote or an execution price.

ASSET	USD / 08:08 ET	24H CHANGE
Bitcoin	\$86,430	+3.00%
Litecoin	\$69.82	+3.76%
Stellar	\$0.223874	+0.52%
Dogecoin	\$0.096556	+1.66%
PEPE	\$0.00000443	+1.14%

1 BTC BUYS

1,237.90 LTC

Calculated from the same morning price snapshot.

1 LTC BUYS

311.87 XLM

Price ratio; ignores spread, fees and slippage.

THE DAY IN THREE SIGNALS

- Policy: the SEC custody framework is a proposal with a future comment deadline.
- Capital: the last closed US spot-BTC ETF session showed net inflows.
- Code: Lightning and Litecoin maintenance releases deserve space beside price charts.

THE EDITORIAL READ

A daily magazine should make time visible. Morning prices, yesterday's closed ETF flows and an afternoon DeFi screen are different observations. They belong together only when their timestamps travel with them.

SOURCES / S22 / calculations by LTC desk

WASHINGTON

Custody comes to the foreground.

The daily policy desk now covers both SEC and CFTC primary sources.

SEC / PROPOSAL / 01 OCT 2026

The SEC proposed a tailored crypto-custody framework for registered investment advisers and regulated funds. It would permit self-custody in specified circumstances and allow state trust companies to hold client and fund crypto assets. The comment period is 60 days after Federal Register publication; an exact closing date has not been confirmed here.

CFTC / STAFF FAQ UPDATE / 24 SEP 2026

Staff updated guidance on tokenized forms of permitted customer-fund investments and blockchain recordkeeping. The update builds on tokenized-collateral and digital-assets-as-margin staff positions. It is guidance for specified registered entities, rather than a blanket approval of onchain lending.

WHAT TO WATCH

Federal Register publication, comment closure, final text and effective dates.

WHY IT MATTERS

Custody eligibility and operational safeguards can influence institutional access.

Editorial inference: policy infrastructure can enable adoption. These actions do not approve cbLTC, cbBTC or a specific Morpho market.

SOURCES / S01 / S02

THE CAPITAL TAPE

Follow the flows.

US spot Bitcoin ETFs / US\$ millions / latest completed session: October 1.

LATEST SESSION

+\$102.7M

THE PRODUCT REGISTER

Bitcoin exposure: the global Top 21.

Reported BTC balances, ranked within the retrieved tracker universe; exchanges and mixed-asset baskets excluded.

#	PRODUCT	STRUCTURE	BTC
1	iShares Bitcoin Trust	ETF / trust	800,535
2	Fidelity Wise Origin	ETF / trust	184,058
3	Grayscale Bitcoin Trust	ETF / trust	131,528
4	Grayscale Bitcoin Mini	ETF / trust	62,874
5	Bitwise Bitcoin	ETF / trust	38,189
6	ARK 21Shares Bitcoin	ETF / trust	35,026
7	CoinShares Physical BTC	ETP	21,270
8	CoinShares Tracker One	Certificate	20,850
9	WisdomTree Physical BTC	ETP	19,260
10	Purpose Bitcoin	ETF	18,373
11	iShares Bitcoin ETP	ETP	18,002
12	Fidelity Advantage BTC	ETF	14,898
13	VanEck Bitcoin Trust	ETF / trust	14,767
14	Bitwise Physical BTC	ETC	10,771
15	Morgan Stanley BTC Trust	ETF / trust	10,436
16	21Shares Bitcoin	ETP	8,195
17	VanEck Bitcoin	ETN	8,195
18	CI Galaxy Bitcoin	ETF	8,016
19	CoinShares Valkyrie	ETF / trust	6,410
20	Franklin Bitcoin	ETF / trust	6,331
21	Invesco Physical BTC	ETN	4,402

This is a holdings-based proxy for physical exposure, not an exhaustive global issuer-verified AUM ranking. Net liabilities, local currencies and reporting dates can change AUM order. Source labels are not legal classifications.

SOURCES / S04

THREE PROFILES

A fund. A treasury. A capital strategy.

IBIT, Strategy and Strive belong on the same spread with their differences made visible.

01 / IBIT

Fund exposure

The tracker reports 800,535 BTC attributed to iShares Bitcoin Trust. October 1 flow was +\$195.6M. Fund collateral supports shareholders' exposure; it is not BlackRock corporate treasury.

02 / STRATEGY

Corporate exposure

Strategy's primary metrics page reports 847,666 BTC. Equity and preferred claims sit in a capital structure around that reserve. Holdings growth alone does not establish common-share return.

03 / STRIVE

Capital-structure watch

The treasury tracker reports 27,462 BTC for Strive. Its issuer IR read failed in this pass; the balance remains REPORTED. New share issuance, senior claims and restricted holdings require filing-level reconciliation.

Dedicated profiles track holdings date, cash, debt, preferred claims, diluted shares, BTC/share and confirmed acquisitions. They do not substitute for issuer filings.

SOURCES / S03 / S04 / S05 / S23 / S24

TREASURY INTELLIGENCE

Twenty reported Bitcoin leaders.

Descending tracker BTC balance / independent listing and issuer reconciliation remains incomplete.

#	COMPANY	TICKER	BTC
1	Strategy	MSTR	847,666
2	Twenty One	XXI	43,514
3	Metaplanet	MPJPY	43,000
4	MARA	MARA	35,577
5	Strive	ASST	27,462
6	Bullish	BLSH	22,000
7	Coinbase	COIN	17,311
8	CleanSpark	CLSK	13,703
9	Trump Media	DJT	12,062
10	Tesla	TSLA	11,509
11	Riot	RIOT	11,380
12	Hut 8	HUT	10,278
13	Block	XYZ	9,117
14	American Bitcoin	ABTC	8,300
15	GD Culture	GDC	7,500
16	Galaxy	GLXY	6,894
17	Next Technology	NXTT	5,833
18	Gemini	GEMI	5,528
19	Silvia	SVIA	5,130
20	Boyaa	0434.HK	4,468
21	Nakamoto Inc	NAKA	4,467

REPORTED, not audited. SpaceX is excluded pending independent listing confirmation. Bitcoin Standard Treasury is unranked in the source and excluded. Full issuer balance and listing reconciliation remains incomplete.

SOURCES / S05

THE VALUATION LENS

The multiple is a methodology.

An attributed mNAV extract with the limitations preserved, rather than a fabricated terminal screenshot.

mNAV.COM / INDEXED EXTRACT / UNRECONCILED

EXTRACT FIELD	DISPLAYED
Strategy / MSTR	846,000 BTC
mNAV	1.06x
Share price	\$154.7 / -1.6%
Full terminal capture	UNAVAILABLE

The indexed terminal balance conflicts with Strategy's primary 847,666 BTC figure. The extract has no reliable observation time, so it is not treated as a current valuation. A separate mNAV Strategy-page title also changed between reads; no synchronized quote is asserted.

EQUITY mNAV

Market capitalization / gross BTC value. Ignores senior claims unless separately adjusted.

ENTERPRISE mNAV

(Market cap + debt + preferred - cash) / BTC value. Requires a synchronized capital stack.

COMMON NAV

Asset value + cash - debt - senior claims; diluted common shares define the denominator.

PUBLICATION CONTROL

Record definition, FX, price time, balance date and diluted-share assumptions beside each multiple.

This page is a data extract and methodology note, not an image of the live mNAV terminal.

LITECOIN REGISTER

The ownership question comes first.

Afternoon tracker extract / 77 entities / reported aggregate 16,323,256 LTC.

SECTOR BALANCES / LTC / SOURCE TAXONOMY

The morning edition recorded 76 entities. The afternoon read includes Bitget and a changed JVCEA balance. This is a change in the observed tracker universe; it does not establish market buying or beneficial ownership.

THE EDITORIAL READ

A custody address can hold many customers' coins. A wrapped reserve can overlap a custodian balance. MWEB is protocol state. Those categories must survive aggregation; a large headline should never become an unsupported ownership claim.

Sector sums differ from the headline by 1 LTC, consistent with displayed rounding or source inconsistency. Source balances are not a deduplicated ownership census.
SOURCES / S07

LITECOIN PRODUCT INTELLIGENCE

Twenty product rows. One honest taxonomy.

Ranked by attributed LTC exposure in the Register; positive rows first, zero-balance ties use source order.

#	PRODUCT	TYPE	LTC
1	Grayscale LTC Trust	Trust	1,956,554
2	Canary LTCC	ETF	214,124
3	CoinShares Physical LTC	ETP	151,145
4	Bitwise Physical LTC	ETP	93,076
5	Bitwise 10	Basket	26,439
6	Virtune LTC	ETP	20,617
7	WisdomTree Altcoins	Basket	4,016
8	Valour LTC SEK	ETP	3,360
9	Bitwise MSCI Select 20	Basket	2,769
10	CoinShares XBT LTC	ETP	1,398
11	CoinShares Top 10	Basket	1,150
12	WisdomTree CoinDesk 20	Basket	937
13	CoinShares Finanzen Top 10	Basket	750
14	21Shares Select 10	Basket	692
15	Hashdex Momentum	Basket	570
16	Virtune Coinbase 50	Basket	524
17	21Shares Future of Crypto	Basket	239
18	WisdomTree Mega Cap	Basket	0
19	Grayscale Large Cap	Basket	0
20	21Shares Crypto Basket	Basket	0

17 positive-exposure rows plus three zero-display entries. This is an ETF/ETP/trust/basket register, not 20 Litecoin ETFs. Multi-asset rows show only LTC exposure. Zero display is not proof of no holdings.

SOURCES / S07

CORPORATE DIGITAL SILVER

A smaller corporate universe, fully named.

Eleven public-company rows in the retrieved Register; do not invent nine more to reach twenty.

COMPANY	REPORTED LTC
Lite Strategy	819,070
Luxxfolio	25,275
Consensus Mining	13,724
Datacentrex	3,395
FRMO	2,116
DeFi Technologies	1,395
Horizon Kinetics	1,290
Winland	1,245
BTC Digital	430
Z Squared	1
SOLAI	0

LITE STRATEGY / PRIMARY CHECKPOINT

The July 30 SEC exhibit reports 819,070 LTC as of July 17, against 31,882,648 shares. That equals approximately 0.025690 LTC/share, calculated at that historical checkpoint. The company describes buybacks funded by LTC sales and covered-call premiums; the release identifies preliminary estimates.

Balances for the other companies remain tracker-reported pending issuer-by-issuer filing checks. A zero-valued row is included in the source universe, not counted as verified exposure.
SOURCES / S07 / S09

THE FOUNDATION DESK

Payments are part of the story.

Litecoin Foundation coverage now gets a dedicated editorial page, with dates attached.

LATEST RETRIEVED FOUNDATION NEWS / 28 MAY 2026

The Nexus Wallet update adds gift-card purchasing alongside Tor and MWEB features. It is the most recent dated headline retrieved from the official Litecoin news index in this pass, not a newly released October 2 update.

THE DAILY BEAT

Wallet releases and merchant integrations.

Foundation announcements and education.

Core engineering, MWEB support and security.

Open repositories, release notes and measurable adoption.

THE EDITORIAL READ

The payments story should be concrete: software someone can use, a network it supports, a dated release and evidence of adoption. Announcement language belongs in the article as an attributed claim, not as proof that an integration is live everywhere.

No newer dated Foundation article was retrieved in this pass. Social posts and newsletter changes have not been exhaustively checked.

SOURCES / S10

PRIVACY + SECURITY

MWEB demands a security desk.

A privacy feature deserves reporting on validation and operator upgrades as much as usage.

LATEST LISTED LITECOIN CORE

0.21.5.8

Released September 12, 2026

The maintenance release strengthens MWEB validation, transaction relay, mining and resource management. It also carries changes from a pools-only 0.21.5.7 security fix. Maintainers strongly recommend upgrades, especially for miners, pools, exchanges and MWEB service operators.

CONTROL	RELEASE-NOTE SIGNAL
Consensus	Rule at mainnet height 3,172,640
Validation	Recheck full MWEB body before connection
Relay	Defer fast relay until successful connection
Resources	Proof-workspace and file cleanup fixes

The April postmortem describes a critical validation bug found in March. That historical incident is context; this edition does not report a new exploit. The Register's 424,590 LTC MWEB balance is a protocol observation, not a corporate reserve.

Activation height is reported from release notes. This pass did not verify a direct-node chain tip or current upgrade adoption.

SOURCES / S11 / S12 / S07

BITCOIN ENGINEERING

The core is the news.

Bitcoin Core 31.1 is the latest version listed on the official releases index at retrieval.

31.1

Two notable fixes in the official notes: excessive chainstate disk reads/writes, and an IP-address leak in private broadcast that could use clearnet despite an enabled privacy network.

CHAINSTATE

Database behavior and compaction affect node reliability and resource use.

PRIVATE BROADCAST

Privacy is an operational property; verify configuration and release behavior.

WALLET + MUSIG

Wallet migration/input-size checks and empty-key-list handling appear in the changes.

RELEASE PRACTICE

Read notes, preserve wallet backups, verify binaries and test the intended environment.

Release availability does not prove network-wide deployment. This is a release digest, not an instruction to change a production node without operational review.

SOURCES / S13

THE LIGHTNING DESK

Fast payments. Visible engineering.

The new daily page follows releases, channel liquidity, routing and real integrations.

LND / 0.21.4-beta

The official LND release list shows 0.21.4-beta as latest, released October 1. The release page states there are no database migrations and provides signed-manifest and reproducible-build verification procedures.

CONCEPTUAL CHANNEL GRAPH / NOT MEASURED NETWORK DATA

THE EDITORIAL READ

Public channel capacity is not total Lightning capacity, and capacity is not payment volume. Private channels and routing reliability matter. This edition verifies a software release; fresh node, channel and capacity figures were not obtained.

Keep Bitcoin Lightning and Litecoin Lightning measurements separate; do not transplant one network's statistics to the other.

SOURCES / S14

TIMECHAIN CALENDAR

Let the chain set the clock.

Dedicated Timechain Calendar page with the capture limitation disclosed.

The supplied Timechain Calendar page was reached, but its numeric dashboard requires JavaScript and was not available through the retrieved page. No current block height, fee level or difficulty estimate is invented.

DAILY SNAPSHOT FIELD	THIS EDITION
Block height / block hash	UNAVAILABLE
Latest block / timestamp	UNAVAILABLE
Mempool / fee bands	UNAVAILABLE
Difficulty epoch / progress	UNAVAILABLE
Halving estimate / method	UNAVAILABLE

THE CAPTURE STANDARD

Publish a timestamped, attributed snapshot or a measured-data redraw with block hash and node/explorer source. Future dates must be labeled estimates. A visual dashboard capture and the underlying machine-readable observations should share the same cutoff.

THE EDITORIAL READ

The block clock is valuable because it anchors publication to a measurable state. An empty dashboard slot is more honest than a plausible-looking number with no provenance.

No screenshot or numerical live snapshot was obtained. This page establishes the recurring desk and its data contract.

SOURCES / S15

THE NAKAMOTO STANDARD

Work secures. People verify.

Satnam Satoshi editorial framework / protocol research, open tools and human sovereignty.

PROOF OF WORK

Bitcoin and Litecoin secure distinct ledgers. Comparing them means reporting their own issuance, fees, hash functions and security budgets. Raw hashrate across different algorithms is not a meaningful security ranking.

MERGED MINING

The recurring merged-mining desk will track Litecoin/Dogecoin auxiliary proof-of-work evidence, pool concentration and supported chains. This edition has not independently verified current pool shares or a complete merged-chain list.

PROOF OF SEVA

Service is the community's productive contribution. It is an editorial and governance principle in SSCOS; it is not a blockchain consensus mechanism or a financial-return promise.

THE EDITORIAL READ

The Nakamoto Standard in this magazine is a named editorial lens: sound-money education, verifiable work and accountable human governance. Protocol claims still require code, documentation and measured evidence.

Concept page. No new hashrate, merge-mining or chain-usage statistics are asserted.

SOURCES / Satnam Satoshi editorial / daily research scope

MORPHO MARKET INTELLIGENCE

Two collateral markets. Two liquidity realities.

Base / USDC loans / afternoon official-UI extract / variable-rate observations, not executable quotes.

METRIC	cbLTC	cbBTC
Borrow rate / 6h	6.53%	4.94%
Instant borrow rate	6.28%	4.89%
Lend rate / 6h	5.73%	4.44%
24h / 7d borrow average	6.64% / 6.85%	4.93% / 4.90%
Liquidation LTV	62.5%	86.0%
Displayed penalty	12.67%	4.38%
Utilization	86.74%	90.04%
Market size / loans	\$1.22M / \$1.06M	\$1.68B / \$1.51B
Displayed liquidity	\$3.84M / CONFLICT	\$167.17M
Oracle price / USDC	68.37 / cbLTC	84,161.80 / cbBTC

The cbLTC UI liquidity figure exceeds its own market size and conflicts with the size/loans/utilization fields. It is displayed here as a source defect; it is not verified borrowable liquidity. The cbBTC rounded figures are broadly coherent.

FIXED-RATE DESK

No executable fixed quote, maturity or liquidation terms were captured. A fixed-rate button alone is not a quoted offer. The UI labels rate windows but APR/APY basis was not independently confirmed.

Snapshot retrieved approximately 19:35-19:45 UTC, October 2. Not atomic to one chain block. Reward rates and personal-position health are unavailable.
SOURCES / S16 / S17

MORPHO CREDENTIALS

Identify the market before the rate.

An exact market identity and an audit scope matter more than a brand-level trust label.

cbLTC / USDC / BASE

MARKET ID

0x9125d0fa03c3137166df68bcc72283477830de2a4a5536512374c573ad4583c3

ORACLE

0x47f961E6653423A77b1EF8Fb680eE53bf7d8a00d

cbBTC / USDC / BASE

MARKET ID

0x9103c3b4e834476c9a62ea009ba2c884ee42e94e6e314a26f04d312434191836

ORACLE

0x663BECd10daE6C4A3Dcd89F1d76c1174199639B9

Coinbase documents cbLTC on Base and cbBTC on Base, Ethereum, Solana and Arbitrum, backed 1:1 by native assets. Its cbLTC send/receive restriction list includes New York. Wrapper support does not remove custodian or redemption eligibility risk.

The Morpho audit index lists Blue reviews by Spearbit and OpenZeppelin and a Cantina contest. Those reviews are not a certification of these exact token/oracle/curator combinations. Canonical token addresses, deployed bytecode and matching audit scope were not independently reconciled in this pass.

Read-only research. No wallet was connected, no user position inspected and no transaction submitted. Credentials here are identifiers and evidence, not an endorsement.

SOURCES / S16 / S17 / S18 / S19

THE BUILDER DESK

From repository to real deployment.

Litecoin ecosystem / LitVM / LiteForge / public code / status matters.

PROJECT	OBSERVATION	STATE
Litecoin Core	0.21.5.8 release notes	RELEASED
Litecoin Foundation	Nexus / May 28 article	DATED NEWS
LitVM	Official ecosystem site	RESEARCH
LiteForge	Public testnet reference	TESTNET
Community x402 proof	Morning report repository link	UNVERIFIED HERE

CODE

Public repo, commit and license. Last commit is not proof of a working release.

DEPLOYMENT

Chain ID, contracts, explorer proof and environment. Testnet stays labeled testnet.

SECURITY

Audit scope, immutable code/version, upgrade authority and incident history.

ADOPTION

Users, fees, transactions and independent usage evidence, with method.

No mainnet deployment, audit completeness or adoption claim for LitVM/LiteForge is certified by this edition. The desk separates announcement, code, testnet and production.

SOURCES / S10 / S12 / S20 / S21 / S22

THE WIDER SETTLEMENT DESK

Stellar belongs in the conversation.

Preserving the wider publication: XLM network, settlement, public products and tokenization.

MORNING XLM / USD

\$0.223874

08:08 ET / +0.52% over 24h

Stellar coverage will track accounts, payments, Soroban activity, anchors and tokenized assets, with the actual asset used for settlement identified. Network adoption and XLM investment demand are different claims.

NETWORK

Active accounts, operations, payments and fees, measured over explicit windows.

PRODUCTS

Issuer AUM, NAV, holdings, structure and dated creation/redemption evidence.

TREASURY

Company-owned XLM requires issuer evidence; product collateral stays separate.

SETTLEMENT

Name the token or asset used. A Stellar integration does not by itself prove XLM settlement.

Fresh issuer-backed XLM treasury and ETF/ETP rankings were not assembled in this redesign pass. No undisclosed holdings or product flows are inferred.

SOURCES / S22 / editorial data requirements

THE WIDER MARKET DESK

Two different market stories.

DOGE and PEPE retain space in the publication, with their distinct technical and market contexts.

DOGE / MORNING USD

\$0.096556

08:08 ET / +1.66% over 24h

PEPE / MORNING USD

\$0.00000443

08:08 ET / +1.14% over 24h

DOGE / THE MERGED-MINING BEAT

The recurring desk follows Dogecoin Core, auxiliary proof-of-work, pool structure and payments. It will keep DOGE supply, transaction and hashrate observations independent of Litecoin figures. Current pool and protocol statistics were not retrieved for this redesign.

PEPE / THE MARKET-STRUCTURE BEAT

The recurring desk follows the exact token contract, liquidity concentration, holders and exchange turnover. A ticker alone is insufficient because similarly named tokens can exist. No new holder-distribution or smart-contract conclusion is made here.

THE EDITORIAL READ

Coverage is not endorsement. The useful comparison is what each asset does, how its market functions and what can be verified, rather than a shared price-performance narrative.

SOURCES / S22 / editorial research scope

THE COMMUNITY + PUBLISHING DESK

A daily institution, with a source trail.

Human publisher: Baba G / Amardeep Malhotra. AI assists research, design and production.

EDITION CONTROL	RECORDED STATE
This revision	LTC-2026-10-02 / v3.0 / daily edition
Original delivery	October 2 / 09:13 ET / PDF attached
Daily schedule	09:00 America/New_York task enabled
SEC + CFTC watch	Separate hourly task enabled
Web publication	Publication path being verified
Daily output	PDF + sources + correction history

TODAY'S MATERIAL CHANGES

The design shifts from a narrow newspaper report to a Bitcoin/Litecoin/Nakamoto magazine with original cover art, back cover, linked contents, product and treasury tables, policy, code and protocol desks. The existing daily task has been updated with this expanded scope.

STILL TO RECONCILE

Live Timechain capture; full mNAV terminal; issuer-verified global AUM ranking; exact token/audit mapping; complete LTC flow histories; fixed-rate quotes. These gaps remain visible instead of being filled with example numbers.

Sent status confirms dispatch, not AOL inbox receipt. Scheduled time is a run time; PDF completion and delivery may occur afterward. This edition has a verified Drive PDF; website deployment is tracked separately.
SOURCES / Verified automation settings / Gmail Sent / S22

THE STABLECOIN RAIL

Circle. Arc. The dollar layer.

Circle and Arc / dated primary-source desk / product plans are not live-market metrics.

USDC

The borrowing currency in the Morpho markets on pages 19 and 20 is USDC. Circle describes Arc as a separate, EVM-compatible layer one for stablecoin finance with USDC gas and planned integrated FX and privacy features. This is Circle's product vision, not proof of mainnet availability or a cbLTC market on Arc.

OCT 01 / POLICY

Circle posted its response to the European Commission MiCA review consultation; a company position is not adopted law.

ARC / STATUS

Track testnet, mainnet, chain ID, explorer, code and independent uptime evidence before claiming live production.

USDC / RESERVES

Use Circle reserve attestations and dated disclosures for backing claims; do not infer from DeFi lending TVL.

CROSS-CHAIN

CCTP support, Arc integrations and Morpho Base markets are distinct systems and require separate source checks.

Circle introduced Arc in August 2025. The October 1 Circle post is a separate policy item; no new Arc launch claim is made here.

SOURCES / S25 / S26 / S16 / S17

PARTNER CANVAS

Space for the builders.

Reserved sponsor inventory / clearly identified house promotion until booked.

HOUSE PROMOTION / NOT A PAID AD

THE LITECOIN FOUNDATION

Support open-source education, maintenance and the people building the Litecoin ecosystem. Explore official project updates at litecoin.com.

FUTURE PARTNER

Full-page inside cover. Sponsor identity, placement dates, link and clear paid label.

ROTATING HOUSE SLOT

LitVM and LiteForge: research and testnet status must remain explicit.

SPONSOR ETHICS

No sponsor can alter rankings, dictate coverage or purchase favorable analysis.

MOBILE FORMAT

Responsive placements become cards between editorial sections without interrupting tables.

Promotional placement is editorial house inventory. No affiliation, approval, or paid sponsorship is implied.

SOURCES / S10 / S20 / S21

THE 21 STANDARD

Twenty-one. A limit and a lens.

Bitcoin supply motif / ranked lists display evidence rather than filling a quota.

21

Bitcoin has a 21 million supply limit. The magazine uses 21 as a recurring editorial frame, with rankings only where comparable observations exist. A 21st empty slot is more honest than an invented Litecoin ETF or treasury.

BITCOIN / 21 REPORTED PUBLIC COMPANIES

The table on page 08 adds Nakamoto Inc. at 4,467 BTC as the 21st selected public company, tracker-reported. Page 06 includes 21 named BTC products with their distinct legal structures. Holdings are not investor flows or company beneficial ownership.

LITECOIN / OPEN RESEARCH SLOTS

The observed product and company universes are smaller than 21. Zero exposure and baskets remain separately labeled.

Twenty-one is the editorial motif, not a claim that 21 qualifying Litecoin ETFs exist.
